Notifications

Due to a scheduled maintenance event, the Pacific ITV site will experience inaccessiblility on Wednesday March 17th 2010, from 1400 - 2200 GMT. The Pacific ITV Site will return to normal operation upon completion of the maintenance event

The following ITV Tracking Portals WILL NOT BE AFFECTED by this maintenance event:

National ITV Tracking Portal: https://national.rfitv.army.mil
Europe ITV Tracking Portal: https://europe.rfitv.army.mil

Did You Know?

The RF-ITV system combines data from the fielded RFID devices and the Satellite Tracking devices, processes it and redistributes it to other systems such as BCS3, GTN, and IDE-AV.

About RF-ITV

The RF-ITV system is a mission essential information system that supports Joint Warfighter operations. RF-ITV uses Radio Frequency Identification (RFID) devices and Satellite Tracking Devices to support the dissemination of In-Transit Visibility (ITV) information required by the Department of Defense (DoD), our Coalition Partners, and Allies of the United States. The RF-ITV system traces the identity, status, and location of cargo from origin (depot or vendor) to destination via a worldwide infrastructure of RFID hardware and software. It also receives near real-time position reports for conveyances from numerous Satellite Tracking Systems (STS) such as the Army's Movement Tracking System (MTS). Data from these two technologies is combined, processed, and delivered to numerous systems such as BCS3, GTN, and IDE-AV to provide global logistics support to the Joint Warfighter. Users can also access ITV data directly through web-based maps and tracking reports.

What's New

28-JAN-2010: RF-ITV Tracking Portal GUI Redesign

The RF-ITV Tracking Portal has been updated with a fresh look and enhanced user navigation. Here are a few of the highlights:

- Login process is streamlined: The DoD Disclaimer and IA Awareness Training pages are no longer part of the login flow. This compliance information is now accessible from the login page.
- Quicker access to tracking shipments: Users can track shipments directly from the home page (top left corner).
- Help is more accessible: The Global Help Desk contact info and the User Training links are now located under a new toolbar menu: Tools and Support.
- Navigation is enhanced: The toolbar menu is slightly reorganized and some items have been renamed to ease navigation.
- When users click anywhere on the toolbar, they are no longer redirected to a query description page.

14-JAN-2010: New Google Earth Mapping Capabilities for NIPRNET users

The RF-ITV Tracking Portal now includes Google Earth mapping capabilities for NIPRNET users. By leveraging the NIPRNET Globe Services (ngs.army.mil) through the Google Earth browser plug-in, NIPRNET users who previously had no access to the Commercial Google map servers can now map shipments, RF sites, and satellite device tracks.
